Professional Summary

Computer Science undergraduate specializing in **Data Science** and **Machine Learning**, with hands-on experience building end-to-end ML applications, predictive models, and analytics dashboards. Skilled in **Python**, **XGBoost**, Machine Learning frameworks **PyTorch**, **Scikit-learn** and **Hugging Face Transformers**, and statistical analysis using **NumPy**, **Pandas**, **Matplotlib** and **Seaborn**, with a proven track record of turning raw data into actionable insights. Seeking a Data Science / Machine Learning Engineer role to apply strong analytical and modeling skills to solve real-world business problems.

Technical Skills

Programming Languages: Python, C, C++, JavaScript, Java

Frontend: React.js, Tailwind CSS, HTML, CSS, Streamlit, JavaScript

ML Frameworks: Scikit-learn, PyTorch, TensorFlow, Hugging Face Transformers, LangChain, LLaMA, XGBoost, NLP

Generative AI: RAG, LoRA, QLoRA, ChromaDB, FAISS

Databases: MySQL, PostgreSQL

Data Analysis and Visualization: Pandas, NumPy, Seaborn, Matplotlib, EDA

Tools & Platforms: Git, GitHub, Google Collab, Anaconda, Vercel, Figma

Core Concepts: DSA, OOP, Operating Systems, Computer Networks, DBMS

Work Experience

Airport Authority of India

15th June 2026 - 31st July 2026

Machine Learning Intern

- Built **Aerodrome**, an ML-powered flight fare-prediction system forecasting prices across 6 main routes using demand, seasonality, and date parameters.
- Engineered the end-to-end ML pipeline in **Python**, **XGBoost**, and **Scikit-learn**; served predictions via a **FastAPI** backend.
- Shipped a **React** frontend for real-time fare queries and containerized the full stack with Docker.

WAISL Digital

July 2025

Application Service Intern

- Built a real-time variance-monitoring dashboard supporting manual (drag-and-drop) and automatic (client-sheet sync) Excel ingestion, visualizing actual vs. application data discrepancies through interactive charts and tables.
- Processed and cleaned structured datasets using Python (Pandas, NumPy), standardizing formats and reducing data inconsistencies across reports.
- Automated repetitive data-handling and reporting tasks, streamlining the team's workflow and improving reporting turnaround time.

Projects

FareLens – AI Powered Flight Price Prediction & Analytics

🔗 Source Code | 🌐 Live Demo

- **Tech Stack:** Python, XGBoost, Scikit-learn, FastAPI, React, Docker.
- Collected and preprocessed historical flight data (route, date, demand indicators, seasonality) and engineered features to capture pricing patterns across 6 routes.
- Trained and tuned an **XGBoost regression model** via [grid search/cross-validation], achieving 0.98% accuracy / RMSE of ₹2137 on held-out fare data.
- Built a **FastAPI** backend exposing REST endpoints to serve real-time predictions to a **React** frontend, with input validation and error handling for edge cases (e.g., missing routes, invalid dates). Containerized the full stack with Docker, enabling one-command local deployment and consistent environments across dev/prod.

DeepCine – Movie Recommendation System

🔗 Source Code | 🌐 Live Demo

- **Tech Stack:** React, JavaScript, FastAPI, FAISS, PostgreSQL, Sentence-Transformers, TMDB API
- Built a full-stack recommendation web app with a **React/JavaScript** frontend and a **FastAPI** backend serving recommendation and search endpoints.
- Generated semantic embeddings of movie metadata (plot, genre, cast) using **Sentence-Transformers**, and indexed them with **FAISS** for fast approximate nearest-neighbor similarity search.
- Designed a **PostgreSQL** schema to store movie metadata and embeddings, enabling efficient querying alongside vector search. Integrated the **TMDB API** to enrich results with posters, ratings, and metadata for movies in real time.
